

THE MOST ROBUST PUBLIC FIBER NETWORK IN THE ARCTIC

As member of Easy Fibre, our network is extended to the rest of Scandinavia and central Europe.

Bredbåndsfylket has been building and managing the most robust fiber network in the Arctic since 2003.

By connecting the public and private sectors, we support the development of science, innovation and digitalization in the region, laying the foundation for the development of hyper-scale data centers in the ideal and low-risk environment of Northern Norway.

With the coastline stretched along the Norwegian sea and the Barents region, we are committed to improve connectivity in the Arctic via The North-East Passage and across the Atlantic Ocean.

We offer :

- **The most redundant network in the Arctic**
- **Over 1200 km of fiberoptic cable**
- **Direct routes to Oslo, Stocholm & Helsinki**
- **Potential landing of the Trans-Arctic Subesea Cable**
- **Ideal locations for hyper-scale data centers**
